Magento – PayUMoney Integration

Step 1: Merge the files and folders in the PayUMoney module with the Magento module. In other words, copy the end files/folders in the integration kit sent to you manually according to the files and folder structure. For e.g.; the payu folder (path - **app/code/community/payu**) in the integration kit is pasted in the following directory in the Magento folder – **ww/magento/app/code/community/.**

The idea is to transfer files/folders from the last matching folder in the integration kit to the last matching folder in the Magento folder. Please notice that the path app/code/community/ are same in the below mentioned example.
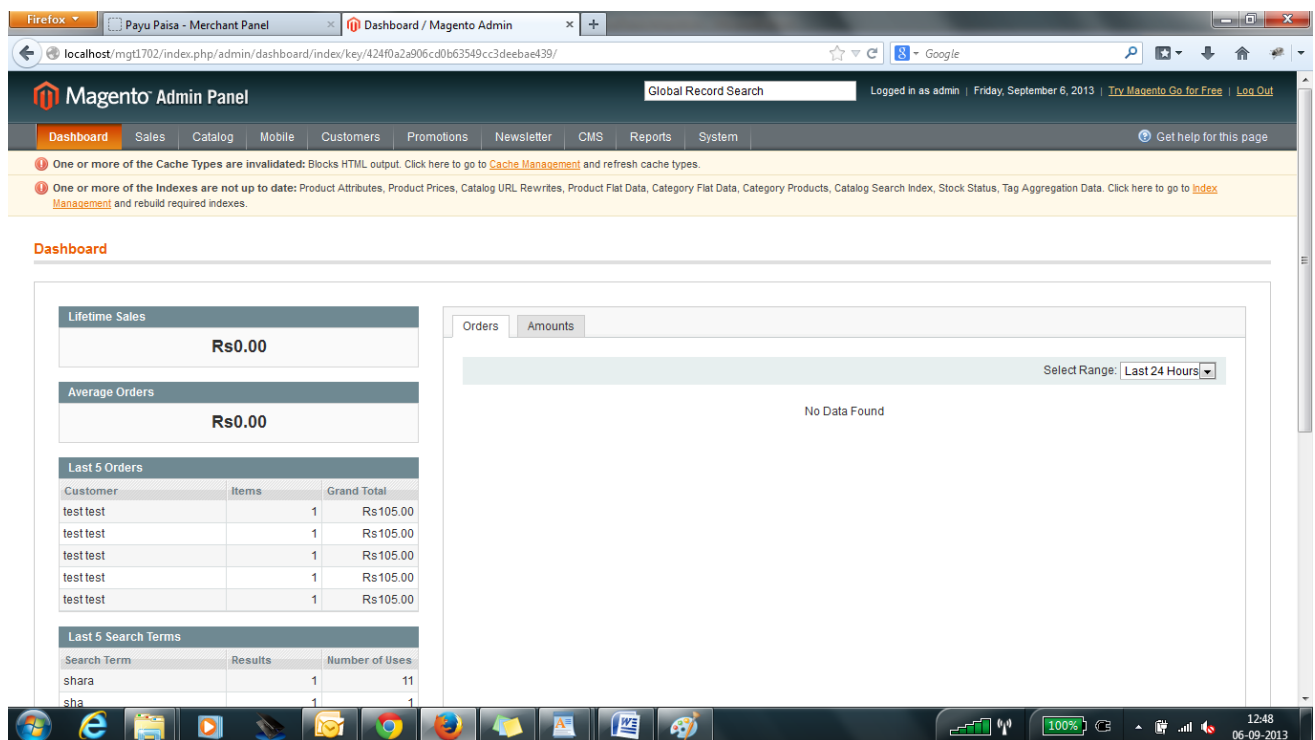

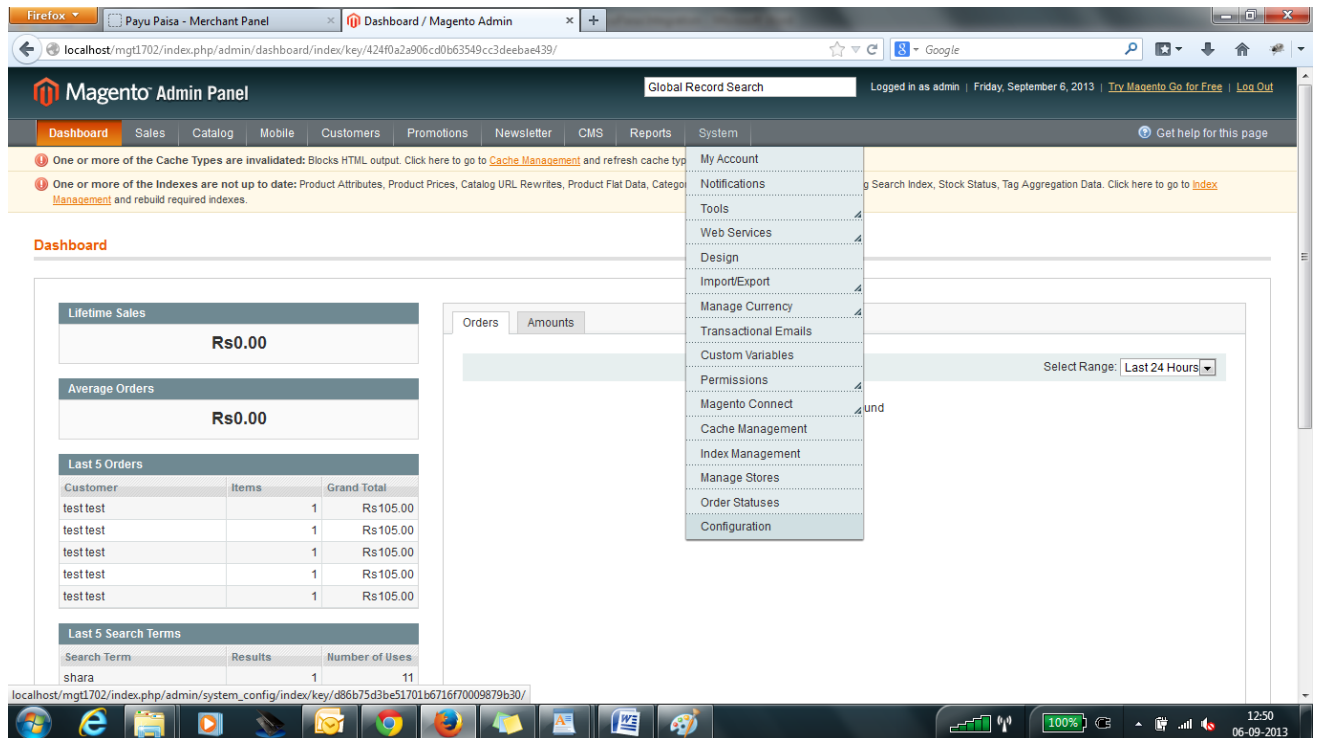

Please view the picture below for better understanding –

**Step 2:** Please go to your Magento Admin Panel.

**Step 3:** Put in your admin credentials and open the dashboard. Check image below –

Step 4: Now hover the mouse over **system** and click on **configuration**. See the screenshot below –

Step 5 : Make sure your default country is '**India'** in the next screen you get (system/configuration/general) –

Step 6: Now scroll down a little and click on **Payment Methods** under **SALES**. You should get the following page –

Step 7: Fill in the details as explained below -

(a) Enabled – Select "**Yes**"
(b) Title – Leave it as it is or you can modify it. This is what the customers will see as the name of the payment option.
(c) Merchant ID – Enter the "**Merchant Key**" supplied to you from PayUMoney.
   Note - Please don't enter the Merchant ID as it won't work).
(d) Salt – Enter the "**Salt**" supplied to you from PayUMoney.
(e) New Order Status – **Pending**
(f) Debug Mode – Leave it as "**No**".
(g) Transaction Mode? – Select "**Production Mode**".

Now click on **Configure** button at the top.
